SUMMARY

AI Engineer focused on building practical LLM applications using Python. Hands-on experience with LLM APIs, prompt engineering, structured outputs, ReAct agents, prompt chaining, streaming, Retrieval-Augmented Generation (RAG), embeddings, semantic retrieval, and Qdrant vector databases.

TECHNICAL SKILLS

Languages: Python

LLM / AI: LLM APIs, Prompt Engineering, Structured Outputs, Pydantic, ReAct Agents, Prompt Chaining, Streaming

RAG: Retrieval-Augmented Generation, Embeddings, Cosine Similarity, Semantic Retrieval, Context-Grounded Generation

Vector Database: Qdrant

Libraries / Tools: OpenAI-compatible API, Sentence Transformers, NumPy, python-dotenv, Git, GitHub, VS Code

PROJECTS

End-to-End Semantic RAG with Qdrant

- Built a RAG pipeline that loads knowledge from a text file, generates document embeddings using `all-MiniLM-L6-v2`, and stores them in Qdrant.
- Created Qdrant collections with 384-dimensional vectors using cosine distance, storing each document with an ID, vector, and text payload.
- Implemented semantic top-*k* retrieval using Qdrant and passed retrieved context to an OpenAI-compatible LLM for grounded answer generation.

ReAct Tool-Using Agent

- Built a Python ReAct-style agent using an iterative Thought–Action–Observation loop.
- Integrated product lookup, calculator, and weather API tools, including action parsing, tool execution, and observation handling.

Resume–Job Description Matching Pipeline

- Built a modular prompt-chaining workflow using sequential LLM calls for resume skill extraction, job-description skill extraction, and candidate–job matching.

ADDITIONAL AI APPLICATION WORK

- Implemented structured customer-ticket extraction using Pydantic models and JSON LLM output.
- Built an LLM issue-classification workflow using role instructions, constraints, one-shot examples, strict output formatting, and fallback handling.
- Implemented streaming LLM responses using incremental API chunks and progressive output.
- Worked with prompt tokens, completion tokens, total tokens, completion limits, and API response metadata.

EDUCATION

Govt. Engineering College Barmer

Bachelor of Technology in Computer Science Engineering (AI & ML)

Barmer, Rajasthan

Sep. 2020 – June 2024

HONORS & AWARDS

- **Finalist, Smart India Hackathon (SIH) 2022:** Selected among top teams nationally to solve real-world governmental problems at the Grand Finale.
- **Technical Coordinator, INFINITO 2023:** Led the technical team for the college sports event, managing cross-functional coordination and event logistics.
